

July 27, 2021

Dear pool and spa operators:

This is a follow-up to an email sent July 16, 2021. We wanted to provide additional details that apply to different types of facilities. Below are the water chemistry standards required for pools, spas, water parks, and spraygrounds using a chlorine sanitizer.

Using a chlorine stabilizer (maximum concentration of stabilizer allowed is 100 ppm), the maximum and minimum concentration of chlorine in the water is as follows:

	Min.	Max.
Pools	2.0 ppm	10.0 ppm
Spas, wading pools, and spraygrounds	3.0 ppm	10.0 ppm

Without chlorine stabilizer, the maximum and minimum concentration of chlorine in the water is as follows:

	Min.	Max.
Pools	1.0 ppm	10.0 ppm
Spas, wading pools, and spraygrounds	3.0 ppm	10.0 ppm

All types of facilities

	Min.	Max.
pH	7.2	7.8

Sincerely,

Contra Costa Environmental Health
