**REPORT:**

At 16:30, the Contra Costa Health Services Hazardous Materials Programs Response Team activated to initiate air monitoring due to diminishing air quality observed throughout the county. Poor air quality was caused by wildfire smoke (PSPS Event 10.26.19). Strike teams were dispatched to air monitor and determine where the highest impacts from the smoke were occurring. Air monitoring results indicated that the smoke observed over the county included fine atmospheric particulate matter in the PM2.5 range (soot) up to coarse atmospheric particulate matter in the PM10 range (dust) at potentially unhealthy levels. Contra Costa Health Services issued a Public Health Advisory due to the smoke impacts to the county at approximately 18:00. Based on the air monitoring results and strike team visual observations. An Advisory was issued to much of central and south Contra Costa County. Air monitoring by the strike teams continued until approximately 19:30. Based on the accumulated air sampling results, it was determined that the poor air quality observed would be a prolonged event and the health advisory would have to remain in place over night and the strike teams were recalled. Active air monitoring was discontinued and scheduled to be restarted the next morning to reevaluate the need for the health advisory.

At approximately 07:30, on October 28th, Contra Costa Health Services Hazardous Materials Programs Response Team resumed public health air monitoring activities. Air quality was diminished due to the ongoing wildfires. The impacted areas of the county identified during the 10/27/19 air monitoring activities were re-sampled. Review of the sampling data indicated that air quality generally improved over night throughout the advisory area. The public health advisory was lifted. However, it was observed that part of the area under advisory was still measuring in the unhealthy range for sensitive populations. It was determined that this area continues to be impacted by the Grizzly Island fire burning in Solano County. Sensitive populations in the area were advised to stay inside and out of the smoke. Based on the strike team's air monitoring results and visual observations. The decision to lift the public health advisory earlier in the morning was confirmed. Air monitoring was discontinued and the strike team recalled at approximately 12:00.

Additional Required Items: Bill of Lading, Request for Invoice, and Site Safety Plan
